## SPEED LENS Lab

► This revolutionary small lab enables you to manufacture Progressive and Bifocal lenses in clear or photochromic (Brown & Grey).  
 Its use is very easy and doesn't need any maintenance.  
 When the operator receive the patient's prescription, a provided chart show him wich mold and gasket to select for the requested RX.  
 Thanks to digital freeform generated molds, the lenses are processed direct from liquid monomer to the finished RX.  
 Then the result is repeatable and the optics is precise.  
 You save space and money by eliminating a costly inventory of semi finished blanks.

► **Power range:**

Sphere +4.00 to -6.00 (0.25 step)  
 Cylinder 0.25 to 2.50 (0.25 step)  
 Add +0.75 to +3.50 (0.25 step)

► **MATERIAL**

NS 2020 W

► **Clear Monomer**

Index : 1.56  
 Density : 1.19 g/cm<sup>3</sup>  
 Abbe value : 40  
 Tintable & drillable

► **Photochromic materiel :**

NS 2020 B

Photochromic Brown

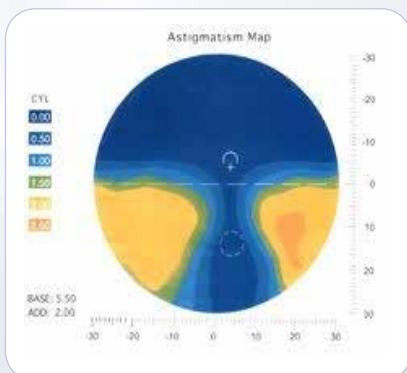

NS 2020 G

Photochromic Grey

The photochromic in mass have a very good performance at a very affordable price.

► **Design**

18-Aspheric Progressive

Last generation in conventional progressive  
 Ideal progressive for every day wearers.

FT-28 Bifocal : Spherical and conventional Flat Top.
